Reservation fee for capacity reservations

The hydrogen core network operators are standardizing the reservation fee for all requests received on or after November 5, 2026 - that is, seven calendar days after the publication of the fourth market information package released on October 29, 2026. From that date onward, the reservation fee will amount to 1/25 of the currently applicable ramp-up fee, with a minimum of €9,000 per year per reservation.

The reservation fee may be credited toward future bookings up to 100 percent, provided that at least one annual booking is made by the end of the reservation period for the reserved capacity, with delivery beginning within four years after the end of the reservation period.
